# MAHIR FAISAL CHOWDHURY

**Data Analyst | Analytics & Automation**

mahirrfaisal07@gmail.com | +880 1537-680364 | Dhaka, Bangladesh | linkedin.com/in/mahirfaisalchowdhury | github.com/mahirtayeb1

## PROFESSIONAL SUMMARY

**Data Analyst** at CarryBee (courier and logistics) with a Computer Science degree and an IEEE-published machine learning paper. Builds automated reporting pipelines, operational dashboards and internal data products with Python, SQL, Google Apps Script, React and Supabase. Work spans SLA monitoring, merchant churn and reactivation, backlog analytics and CRM development for Operations, Product and Business teams.

## WORK EXPERIENCE

**Junior Data Analyst, Data Intelligence & Research** **May 2026 – Present**

CarryBee, US-Bangla Airlines Ltd (courier and logistics) Dhaka, Bangladesh

- **Reporting Automation:** Built Python, SQL and Google Apps Script pipelines that cut recurring manual reporting from **5–6 hours to about 20 minutes**.
- **AI Data Assistant (Text-to-SQL):** Connected Claude Code to the company database with read-only access and supplied 20+ existing scripts and 30+ SQL queries as business-logic context, so questions asked in plain language are answered with generated SQL, cutting simple ad-hoc lookups from **about 5 minutes to seconds**. Used it to produce the team's first return parcel tracking report, adapted from existing FID report logic and verified, in **under 10 minutes** against an estimated 2–3 hours by hand. Validated 10 answers against existing reports: 9 matched, and the one mismatch was traced to newer logic missing from the context.
- **First Mile Transit SLA Monitoring Dashboard:** Built a dashboard on the Operations team's manually maintained tracker data with stage-wise SLA breach monitoring, a hub-by-day breach heatmap and drill-down views, tracking New, Repeated and Cleared breaches day over day and flagging repeat SLA offenders. Beyond the original requirement, added validation checks against the source of truth to surface inconsistent or illogical manual entries, making the reported SLA figures more reliable.
- **Merchant Reactivation:** Identified inactive and order-dropped merchants, analyzed their July–August performance and pain points, and built merchant-specific reports showing service improvements, with KAM contacts included to speed up reactivation.
- **Discount Slashing Analysis:** Built a data pipeline from the database into Google Sheets covering orders, activity and pricing for 670+ discounted merchants, then segmented them under top-management guidance into inactive, low-volume and below-threshold-rate groups across 5 delivery zones. Documented management's decisions per merchant and handed them to the responsible team for execution.
- **KAM CRM:** Designed the database schema and built a role-based internal CRM with React, Node.js and Supabase, covering merchant performance, KAM activity tracking, alerts, follow-up priorities and target setting.
- **Team Task Tracker:** Built an internal task management tool with React, Node.js, Supabase and Claude Code for task ownership, sprint planning, progress tracking and team workload visibility.
- **RFMV Merchant Segmentation:** Built a Python segmentation model that extends RFM with Velocity (change in monthly order rate), scoring 6,300+ merchants with rule-based recency and K-Means clustering into 12 lifecycle segments, with the top-value merchants isolated as a separate tier. Delivering week-on-week and month-on-month segment movement reports to management every month to inform merchant retention and growth decisions.
- **Churn Prediction & Retention Analytics:** Developed retention, activity and churn prediction analyses to identify at-risk merchants and support proactive interventions.
- **Operational Analytics & Feature Adoption:** Analyzed parcel backlog, aging, hub and regional performance to find bottlenecks, and built Apps Script dashboards measuring adoption of internal tools such as Pickup Automation and Reprocess.
- **Cross-Functional Collaboration:** Worked with Operations, Product, Business, Finance and leadership teams to turn business requirements into dashboards, KPI reports and unified data definitions.

**Data Analyst Intern, Data Intelligence & Research** **Feb 2026 – Apr 2026**

CarryBee, US-Bangla Airlines Ltd (courier and logistics) Dhaka, Bangladesh

- **Order Forecasting:** Developed processed-order forecasting with Python, Pandas, Scikit-learn and SQL to support workload and resource planning.
- **Operational Reporting:** Managed recurring analytics on FID and return backlog, merchant pickup performance, parcel aging, on-hold orders and hub-level performance.
- **Business Investigations:** Conducted merchant segmentation, churn, payment, return and fake-return analyses, plus time-sensitive ad-hoc requests, for Business and Operations decisions.

## PROJECTS

**Mexico Toy Sales & Inventory Analysis Dashboard** | *Metabase, Supabase, PostgreSQL, Appsmith* **Dec 2025**

GitHub | LinkedIn Article

- Built an internal data product with Supabase and Appsmith (CRUD for stores, products, sales and inventory) and embedded Metabase dashboards with store-level and date-range filters.
- Designed automated restock logic (Urgent, Fast, Within Week, Sufficient) from weekly average sales, demand ranking and reorder levels, with PostgreSQL triggers syncing sales to inventory.

**University Marketing Campaign Analysis** | *PostgreSQL, Supabase, Python, Looker Studio* **Sep 2025**

GitHub | Dashboard

- Built a Python and SQL ETL process that merged campaign, outreach and applicant data into a master table, removing 42 orphaned and 5 duplicate records.
- Analyzed 38K+ call logs (29.86% connected) and built a Looker Studio dashboard of call volume, success rate and peak calling hours.

## SKILLS

**Technical Skills**

- **Programming:** Python, SQL, JavaScript, Java, HTML/CSS
- **BI & Visualization:** Metabase, Looker Studio, Power BI, Excel (Pivot Tables, Power Query), Google Sheets, Matplotlib
- **Data Analysis:** Churn Analysis, RFM/RFMV Segmentation, K-Means Clustering, Forecasting, SLA Monitoring, KPI Reporting, Data Validation, ETL
- **Databases & Backend:** PostgreSQL, Supabase, BigQuery, Node.js, React
- **Automation & Low-Code:** Google Apps Script, Appsmith, AI-Augmented Development (Claude Code), LLM Text-to-SQL
- **Machine Learning:** Pandas, Scikit-learn, TensorFlow, CNN, YOLO, Data Augmentation
- **Tools:** Git, GitHub, Docker, Linux

**Soft Skills**

- **Strategic Thinking** - Looking beyond the stated requirement to anticipate risks, such as building data-integrity checks into dashboards that rely on manually entered data
- **Data Storytelling** - Turning operational and merchant data into clear, actionable reports for non-technical stakeholders
- **Stakeholder Collaboration** - Working with Operations, Product, Business, Finance and KAM teams to turn requirements into working solutions
- **Problem-Solving** - Diagnosing backlog, SLA and data-quality issues and tracing them to root causes
- **Process Improvement** - Spotting repetitive manual work and replacing it with automated workflows
- **Ownership** - Taking internal tools from requirements and schema design through to delivery

## PUBLICATION

**"Optimizing Citrus Leaf Disease Detection: An Efficient Custom CNN Leveraging Efficient Training Parameters"**, IEEE International Conference on Artificial Intelligence in Engineering and Technology (IICAIET), 2024, published in IEEE Xplore. The custom CNN reached 97.84% validation accuracy and 96% F1-score with fewer trainable parameters than pretrained models. View Paper

## EDUCATION

**BRAC University** Dhaka, Bangladesh

Bachelor of Science in Computer Science Oct 2024

## LEADERSHIP & ACTIVITIES

**Secretary of Finance, BRAC University Film Club** **Spring 2019 – Spring 2022**

- Managed budgets, forecasts and financial documentation for club events and film festivals, and ensured compliance with university financial protocols.
- Interviewed and onboarded new club members.
